Sent by Shelley Editor: Readers, which airtight containers do you recommend? App free for mac.. Store It in an Airtight Craft Paint Storage Cup Place the ball of clay inside a small, airtight, plastic craft paint storage cup with a snap lid (I use Buddy Cups) and snap the lid shut.. For reference if anyone else has this problem with their POP containers, I've contacted OXO, and while they are standing by the claim that these are airtight, they are willing to give me either a refund (if I can find all my receipts from the last 2 years) or equal value in their other products if I send mine back to them.

Tip: Before you open the cup to take out more metal clay, have a piece of plastic wrap handy to quickly cover the clay you remove before you roll the remainder into a ball and put it back into the cup.. Cover Your 'Working Clay' With a Humidifying Dome Set your ball of 'working clay' on your work surface and cover it with a humidifying dome.. Perfect for baby food, herbs, spices, etc Our mini storage boxes are available in a choice of SIX colours and are made.. Tip: It's a good idea to wrap your ball of clay loosely in plastic wrap while it remains under the dome to minimize moisture loss.. If these aren't in fact as airtight as advertised (which mine clearly are not), what else is there that's comparable (and is in fact airtight)? When I bought the POP containers I thought they were the best option out there.

When you need more of the clay, it's quick and easy to flip open the lid, take out what you need, quickly roll the remaining clay into a ball, pop it back into the cup, and snap the lid shut.. Create your own clay humidifier by securing a piece of sponge inside the bottom of a disposable plastic cup (or a no longer used short drinking glass).. You can also purchase a humidifying dome made of earthenware clay (similar to a flower pot, but glazed on the outside) that will hold the moisture in even longer and doesn't require you to wrap your clay in plastic while it's under the dome.. Mist the inside walls of the cup with water Then place the clay on a piece of glass or nonstick sheet and invert the cup over your clay to create a humidifying dome. MAC Constructivist is a warm brown with a pearl finish that is discontinued and retails for \$18.. It will work even better if you lift the dome, wet your fingertip and draw a circle of water on the glass or non-stick sheet to match the circumference of the lip of the dome and then replace the dome so that the circle of water seals the rim to the work surface.. Before each work session, wet the sponge so it's fairly saturated with water, but not so much that it drips. e828bfe731 [Free Classic Slots For Ipad](#)
